

ANNOTATION

to the dissertation of Sharipova Shahnoza Abdurazoqovna on the theme “The Improvement of Infrastructural Facility of the Regional Economy in the Market Conditions (on the example of Sughd region of the Republic of Tajikistan)”

Key words: the development of regional infrastructure, regional economy, industrial infrastructure, social infrastructure, market infrastructure state regulation, conception, capital.

Actuality of research issue of the dissertation. At the beginning of the XXI century, the Republic of Tajikistan faced a number of challenges, among which the critical accumulated depreciation of the national and regional infrastructure is significant; it is because of chronic deficit of public and private investment. The development of infrastructure occupies an important place in strengthening of economic achievements, since this sector is a complex of sectors designed to create favorable conditions for the operational economic activity of all subjects of the national economy. Acting as an important link in the reproduction process, the infrastructure serves as a necessary condition for the implementation of not only production, but also exchange operations in the market. The infrastructural sphere of the regions is designed to provide services to all sectors of the national economy, which is reflected in the creation of a single national economic complex. All of the above characterizes the relevance and practical significance of the research carried out in the field of improving the infrastructure provision of the regional economy in the market conditions.

The object of the research is the economic relations connected with the functioning of all structures and sectors in the regional economy.

The subject of the research is the improvement of infrastructural provision of the socio - economic system of Sughd region of the Republic of Tajikistan in modern conditions.

The purpose of the dissertation research. The purpose of the dissertation consists of the substantiating approaches, both theoretical and methodological ones, to the issues of regional infrastructure security, as well as to development of measures directed to of promoting their activities in achieving sustainable development.

The scientific novelty of the research consists in the development of theoretical provisions for the functioning of infrastructure entities in the regional economy and the development of practical recommendations for improving their activities, contributing to the sustainable development of regions, as well the theoretical concept of the development of infrastructure industries has been systemized, and the conceptual apparatus of the research has been clarified, the multiplicity of methods for assessing infrastructure security regions has been substantiated, an assessment of the infrastructural provision of the region has been given, an integral index of infrastructural provision of the Sughd region has been calculated and an economic and mathematical model of the influence of infrastructure provision on the development of the region has been developed.
