

## ANNOTATION

for the dissertation research of Egamkulov Makhjudjon Mukhammadovich on the topic "Innovative development of the business sector in the socio-economic system of the region (on the example of the Sughd region, the Republic of Tajikistan)"

**Key words:** innovation, business sector, socio-economic system, region, business development, sustainability, factors, free economic zone, entrepreneurial activity, market, competition, tax, finance, industry, technology.

The purpose of the dissertation research is scientifically grounded, along with this, a set of measures was developed to enhance the innovative activity of the entrepreneurial sector in the socio-economic system of the region.

Scientific innovations of the dissertation research include the development of theory and the development of a system of measures for organizing and improving innovation in the regional business sector.

The dissertation examines the essence of innovative entrepreneurship and methodological approaches to its assessment, as well as a study of foreign experience in the development of innovations in the field of business.

The theoretical and practical significance of research lies in the development and improvement of certain theoretical and practical provisions for the formation of tools for the innovative development of small and medium-sized businesses in the regional economy, allowing for effective management and real development in practice.

The results of dissertation research are of practical importance, their use contributes to an increase in the efficiency of the regional economy and the degree of controllability of innovative activities.

The state and features of the development of innovative activity in the entrepreneurial sector of the Sughd region are considered - trends in the development of the industry are analyzed, the conditions for introducing innovations into business structures are assessed, as well as the FEZ "Sughd" as a locomotive of innovative entrepreneurship in the region.

It has been established that the activity of innovative activity in the entrepreneurial sector of the economy of the Sughd region of Tajikistan is unstable.

This process is still in its infancy in the region's economy and has not become widespread. It was investigated that most of the entrepreneurial structures in the Sughd region operate mainly in low-tech industries, including the production of food products, beverages, textiles, leather goods and footwear. Also, the work reveals the issues of improving the process of intensification of innovative entrepreneurship in the region, issues of enhancing entrepreneurial activity, at the same time, methods of state regulation of innovative activity in the entrepreneurship sector are considered.

The possibility of developing innovative processes in each region based on the use of advanced achievements of science and technology has been proven.
