ANNOTATION
to a thesis research of Fayzieva Dilnoza Izatulloevna on a topic: "Industrial potential as an economic growth factor of the region (on the example of the Sughd region of the Republic of Tajikistan)

Dissertation of Faizieva Dilnoza Izatulloevna is devoted to the analysis of the formation, use, development of the industrial potential of the Sughd region of the Republic of Tajikistan, as well as the conceptual provisions and socio-economic significance of industrial potential in modern conditions, methodological aspects of the industrial potential assessment of the region and foreign experience in management of the industrial potential. The definition of industrial society, various values of industrial potential and its structural properties are studied.

The state and modern problems of the Sughd region at the stage of economic growth, the assessment of the use of the industrial potential of its region, the state and trend of development and the impact of the development of industrial potential on solution of the socio-economic problems of the region are considered.

The causes of the unequal location of the industry in the region are identified and analyzed. Based on the analysis of the industrial potential, its components are identified: production capabilities (the volume of competitive products), innovative capabilities (environmental and low-consumption products) and management capabilities (reduction of administrative costs).

An analysis was made of the use of the industrial potential of the Sughd region and its division into 3 conditional parts with a huge industrial potential, as well as the cartography of the industrial location in the region's economy was studied.

In the course of the study, ways were developed to increase the effective use of the industrial potential of the region and a mechanism for its effective use. On the basis of the results obtained, an algorithm was determined for the formation of the industrial potential of the Sughd region.

This decision is based on the fact that the dissertation research contains new scientific elements, the completed scientific research is devoted to a topical issue.
