

Abstract

for the dissertation of Makhmudov Abdurakhmon Subkhoniddinovich on the topic: “Managing the region’s resource potential in the context of the implementation of import-substituting policies (on the example of Sughd region of the Republic of Tajikistan)”, represented for the degree of candidate of the economic sciences, on specialty 08.00.05 - Economics and national economy management (regional economy)

Keywords: region’s economy, resource potential, methodological approaches to assessing the resource potential, socio-economic development of the region, the region’s potential, import substitution, the model of import substitution in the region, import substitution policy.

The relevance of the theme of dissertation research. In present, the development of the national economy of the Republic of Tajikistan is based on the "National Development Strategy of the Republic of Tajikistan for the period until 2030", which determines the direction of socio-economic development of the regions based on the optimal use of their resource potential. Such kind of an aspect to the economic development of the country necessitates the modernization and improvement of the effectiveness of regional policy. The use of organizational and managerial models affects the effective use of resource potential, its growth and development dynamics, which affects the economic situation in the region and the country as a whole. In a state of high import dependence, the import substitution process, the effective implementation of which will satisfy domestic demand for competitive products instead of imported ones, and in the future will provide access to foreign markets, is an effective tool that stimulates the development of industries in the region. As the result, there is a need to develop theoretical and methodological foundations for managing the resource potential of the region’s economy in the condition of the import substitution process.

The object of research is the totality of socio-economic relations associated with the use of the resource potential of the regions in a market economy.

The subject of the research is the scientific and practical aspects of managing the resource potential of the regional economy in the condition of the implementation of import substituting policies.

The purpose of the dissertation research is the theoretical and methodological substantiation of the resource potential management process and the development of practical recommendations aimed at modernizing the regional economic policy in the condition of the import substitution process.

The scientific novelty of the research results lies in the development of theoretical principles, also the assessment of the resource potential of the region and the development the complex of practical recommendations directed at managing the resource potential of the region in the condition of the implementation of the import substitution policy. In the process of the research, the following results were obtained that determine the scientific novelty and are the subject of protection: an own interpretation of the category “regional resource potential” is proposed, the theoretical foundations of the study of the effective use of the resource potential are generalized, the experience of foreign countries on the implementation of import-substituting policies is systematized, identified problems in using the resource potential of the region, a model has been developed that allows the efficient use of resource potential for the implementation of import substitution in the region, a roadmap has been developed for modernizing economic policy in the context of strengthening the import substituting potential of the Sughd region.
