

ANNOTATION

for the dissertation of Nasiba Khafizovna Sharopova on the topic "The resource potential of the region in the system of factors of its economic development (on the example of the city of Isfara, Sughd region)"

Key words: resource potential, socio-economic development of the region, methodological approaches to assessing the resource potential of the region, effective use, government regulation, investment, innovation, SWOT analysis.

Relevance of the topic of dissertation research. In the National Development Strategy of the Republic of Tajikistan until 2030, special attention is paid to the economic development of each region of our country and the effective use of its resource potential, as well as improving the welfare of the population in all corners of our country as a whole. It should be noted that each city and region of the republic, including the city of Isfara in the Sughd region, has a wide range of resources, but there are many unresolved issues in this direction. In this regard, an important factor for the regional socio-economic development of the region is an increase in the level and quality of life of the population, the creation of strategic management and the rational use of resource potential.

The object of the research is to develop the development of the economic and social system of the region to increase the economic potential of the region.

The subject of the research is connected with the economic and social relations of resource abilities on the connection of economic and social relations for the assessment and use of ensuring the economic and social development of the region.

The purpose of the dissertation research is to improve the theory of regional economic development through the effective use of the potential and economic development of the city of Isfara.

The scientific novelty of research is aimed at developing theoretical provisions, as well as assessing the resource potential of the region and developing a set of practical recommendations for using the resource potential of the region. In the course of the study, new results were obtained that revealed scientific innovations and are the subject of protection: the theoretical provisions of the resource potential are systematized, based on the fact that the methods for assessing the use of regional resource potential are very diverse; studied, identified models reflecting the impact of the level of use of the resource potential and expected results, identified priority areas of economic development in Isfara and developed recommendations for its effective use.
